CAM Lock and Pins

step 1

HOW TO USE CAM LOCK FASTENERS

To assemble this product hardware called Cam Lock Fasteners are used.
The below is information on how these work.
Cam Locks are fasteners used to join two boards together,
usually the edge of one board(A) to the flat side of another board(B)

Ensure that you use the correct images that are representative of the hardware used in the product

step 2

To use Cam Lock Fasteners

The Cam Pin is inserted into the flat side of a board, it is important that:

- * The cam pin is kept vertical and is not put in on an angle
- * Cam Pin is inserted up to the collar
 - * Too far and it wont catch the Cam Lock (Do not Over Tighten)
 - * Not enough and the resulting product wont be stable

step 3

To use Cam Lock Fasteners

Now fit the hole in the edge of the joining board over the Cam Pin

step 4

To use Cam Lock Fasteners

The Head of the Cam Pin will be visible in the large hole on the side of the joining board

To use Cam Lock Fasteners

Notice the Cam Lock has a "C" Shaped back An Arrow or +/- signs on the front, indicated the open section on the back of the Cam Pin

step 5

To use Cam Lock Fasteners

In sert the Cam Lock into the large hole so the opening of the "C" fits over the head of the Cam Pin.You must ensure that the Cam Lock is pushed to the bottom of the hole to catch the top of the Cam Pin

step 6

To use Cam Lock Fasteners

Use a flat screwdriver to turn the Cam Lock clockwise one half a turn so it Locks onto the head of the Cam Pin.Turn only until it is snug-over-tightening could cause the Cam to bend or break. If it will not turn the full amount,turn the Cam Pin out (counter-clockwise)one full turn,and try the Cam Lock again.
