TO USE CAM LOCK FASTENERS

To assemble this product hardware called Cam Lock Fasteners are used. The below is information on how these work.

Cam Locks are fasteners used to join two boards together, usually the edge of one board (A) to the flat side of another board (B).

The Cam Pin is inserted into the flat side of a board, it is important that: The cam pin is kept vertical and is not put in on an angle.

Cam pin is to be inserted up to collar

Too far and it won't catch the Cam Lock (Do Not Overtighten)

Not enough and the resulting product will not be stable.

Now fit the hole in the edge of the joining board over the Cam Pin.

Notice the Cam Lock has a "C" Shaped Back. An arrow or +/- signs on the front indicate the open section on the back of the Cam Pin.

Insert the Cam Lock into the large hole so the opening of the "C" fits over the head of the Cam Pin. You must ensure that the Cam Lock is pushed to the bottom of the hole to catch the top of the Cam Pin.

Use a Flat screwdriver to turn the Cam Lock clockwise one half turn so it locks onto the head of the Cam Pin. Turn only until it is snug. Over tightening could cause the Cam to bend or break. If it will not turn the full amount, turn the Cam Pin out (Counter-clockwise) one full turn, and try the Cam Lock again.
